

Minutes

- Winston and Faris will copy and paste their work to the end of this document
- We will do PDF for our deliverable
- Need to convert point-form to sentences before we submit
- Will be doing waterfall (just to re-iterate)

For the meeting we will be introducing each other as follows: (IC-310)

Chris -> Faris

Faris -> Harrison

Harrison -> Vili

Vili -> Winston

Winston -> Chris

Explain what project is about:

Vili will explain what matplotlib is about briefly.

Demo:

Chris will do a simple pyplot tutorial

Harrison will do a more complex one where he used matplotlib in his other project (need to figure out how to run it again)

Reason why we chose matplotlib:

Because Harrison already used it before so he has some expertise and he was lobbying us really hard to do a project on matplotlib =)

We all know Python really well, Python is a simple language

Choice of software engineering process:

Winston and Faris will talk about this part in the meeting.

Tools we will be using for the project:

Git for version control

Pyreverse for reverse engineering

Extra Things to know for meeting:

Study deliverable 1 (architecture and software dev process). Anya will ask us questions on it.
